EDUCATION

BBA in Financial Technology | BA in Economics

City University of New York, Queens College

Kissena Blvd, NY

June 2021 – June 2026

Certificates: Bloomberg - Market Concepts, Finance Fundamentals, Spreadsheet Analysis

COURSEWORK

MARKETING & DISTRIBUTION

As affordable and accessible financial tools are becoming increasingly limited in the market, I initiated the development of FINDEX: a SaaS platform focused on delivering structured market insight.

- Defined product strategy and target markets, supporting projected acquisition of ~1,500 users within 18 months.
- Modeled subscription and revenue scenarios, estimating ~\$50K ARR at an early stage through tiered offerings.
- Built an NLP pipeline to aggregate, tokenize, and rank 500+ financial articles weekly by market signal strength, reducing noise by ~35%.
- Modeled cloud-based launch costs for FINDEX to evaluate scalability, operating efficiency, and early-stage cost-benefit viability.

INTERMEDIATE FINANCE

As part of an equity valuation project aimed at emulating an M&A proposition for a stable industry with mixed revenue streams, I targeted Stryker Corporation for evaluation.

- Calculated beta, capital structure weighting, and cost of equity assumptions using current market inputs (Mar 2026), determining a .93 beta value compared to the S&P 500.
- Conducted comparative financial and WACC analysis across major medtech peers to evaluate relative costs of capital, valuation position, and long-term growth, resulting in an 8.76% expected return on investor capital (WACC).
- Developed a multi-sheet financial dashboard consolidating income statement, balance sheet, cash flow, and organic growth metrics into a centralized decision-support framework, projecting approximately \$25B in expected revenue from 2026 through 2031.
- Finalized a discounted cash flow (DCF) model projecting future free cash flows and identifying ~15% overvaluation under conservative operating assumptions and proposed an in-depth M&A evaluation to acquire Stryker Corporation.

EXPERIENCE

DATA ANALYST INTERN

Date Maroon

Remote, NY

March 2026 – Present

As part of Maroon's beta-stage product and analytics efforts, I evaluated onboarding, funnel progression, user feedback, and product friction to identify data gaps, retention risks, and high-impact UX improvements.

- Built a funnel KPI framework covering onboarding, profile completion, conversation engagement, and paywall conversion.
- Analyzed Android/iOS beta flows and identified profile crashes, waitlist friction, and UI controls as blockers to retention.
- Recommended product improvements, including crash tracking, cohort flags, compatibility fixes, and intent filtering.

DATA ANALYST INTERN

Department of Transportation

Manhattan, NY

March 2025 – May 2025

As part of the NYC DOTs initiative to help make the streets of New York City safer, I worked with the Public Engagement Group to collect, clean, and structure field data for deliverable development.

- Streamlined urban planning data by automating geospatial datasets using ArcGIS and Power Query.
- Developed reusable Power Query ('M') templates that reduced manual data cleaning time from ~2 days to under 30 minutes.
- Centralized and standardized monthly reporting pipeline, improving data consistency and accessibility for cross-functional teams.

CLIENT DATA OPERATIONS COORDINATOR

IMS NY Service Corporation

Rockville Center, NY

August 2025 – September 2025

As part of IMS's physician onboarding and credentialing operations, I compiled, verified, and structured provider information while communicating credentialing requirements between clients, physicians, and internal verification teams.

- Managed data intake and onboarding workflows for physicians and clients to update internal and external eDHR systems.
- Conducted client consultations with independent physicians to assess operational needs and guide onboarding into the network.
- Automated extraction and cleaning of 5,000+ records using Power Query, reducing processing from ~3 days to under 10 minutes.

TECHNICAL SKILLS

- **Software & Tools:** Microsoft Office Suite, Advanced Excel (VBA & Macros); ArcGIS; EVIEWS; Bloomberg Terminal; Salesforce/Agentforce
- **Programming Languages:** Python, C++, Rust, R, SQL, 'M' Formula Language
- **Visualization:** Power BI, Tableau, Looker
- **Analytics:** Funnel Analysis, KPI Development, Customer Behavior Analysis, Product Analytics, Data Cleaning, Dashboard Reporting, Statistical Modeling
